2 – Undercounter/in-cabinet mounting

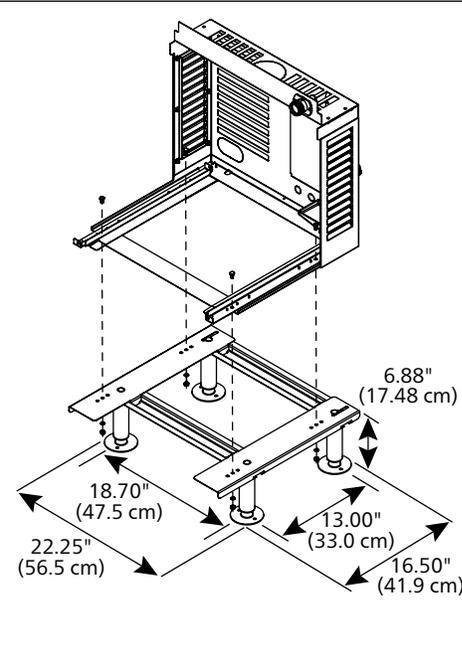

Cabinet details	
<p>Important specifier notes</p> <ol style="list-style-type: none"> 1. Cabinet door opening must meet minimum size requirements shown and be free of obstructions to allow ice machine to slide out (no lip or utilities to block removal). 2. Cabinet base must be capable of supporting ice machine and allow ice machine to rest flat on cabinet bottom. 3. No counter supports, electric or plumbing can run in front of the ice machine. 	<p>Cabinet door opening 24.00"W x 22.25"H (60.9 cm x 56.5 cm) minimum</p> <p>slides out</p> <p>Cabinet base must be flat & free of obstructions (no lip or utilities to block removal)</p>

4 – Horizon ice machine mounting accessories

Optional wall mount bracket

Optional machine stand

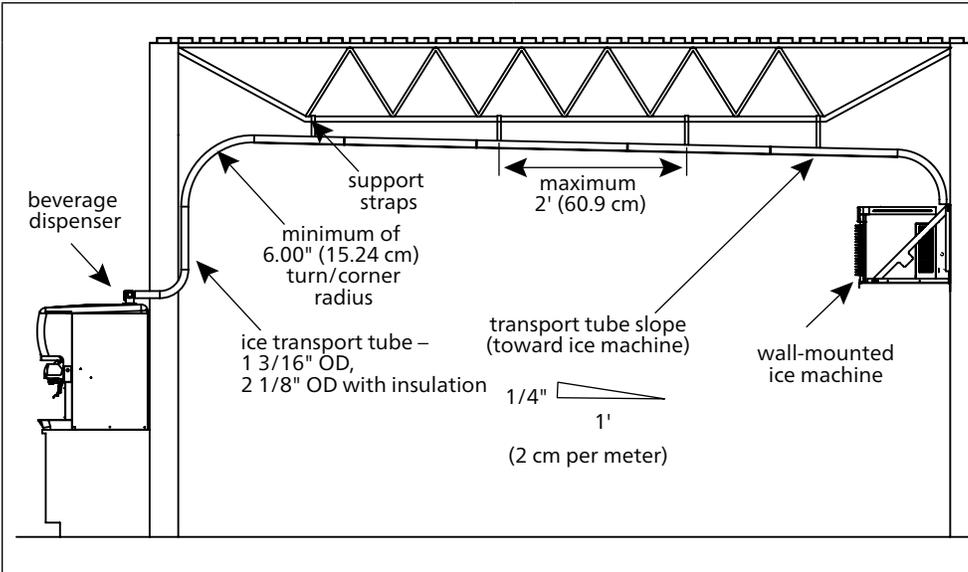

Important specifier notes:

1. For secure wall mounting, specify optional wall mount bracket.
2. Wall and fasteners must support the weight of the ice machine, bracket, supply water and ice. Use of a backing board may be required with hollow wall construction.
3. Machine stand mounting adds 6.88" (17.48 cm) to height of ice machine.
4. No dips in tube routing allowed.
5. Ice transport tube needs minimum 1/4" per foot (2 cm per meter) pitch toward ice machine and should be secured to prevent dips and traps from forming.

5 – Horizon ice tube runs - specifier guidelines

Long tube runs for RIDE remote ice delivery equipment

Important specifier notes:

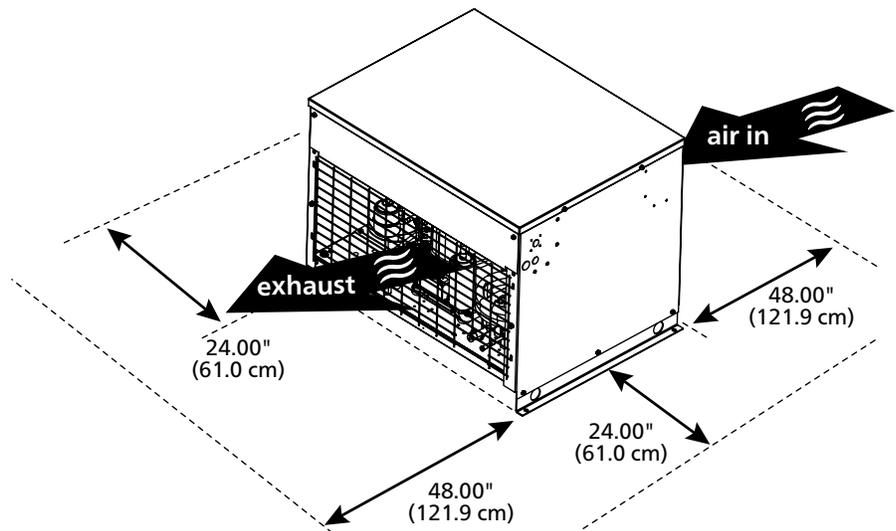

1. 75' (22.8 m) maximum ice transport tube run (10' (3.04 m) for Micro Chewblet ice).
2. Tubing routing bends must have a 6.00" (15.24 cm) radius or larger.
3. If not supported from underneath, secure insulated ice transport tube at least every 2' (60.9 cm) to prevent dips or traps.
4. Relative humidity levels above 80% in areas where the ice machine or ice transport tube are located may produce excessive condensation that will cause water damage.
5. Contact factory for recommendations on running tubing through a decorative soffit or chase.

Remote condensing unit

Condensing unit installation specifications

Important specifier notes:

1. Provide front, back and side clearances as shown.
2. The maximum refrigerant line run length is 100' (30.5 m). Installations with up to 50' (15.2 m) line run require: 700 Series – 8 lb (4 kg) of refrigerant
Consult installation manual for correct refrigerant charge if line run exceeds 50 ft (15.2 m).
3. The maximum line rise above the evaporator is 35 ft (10.7 m).
Condensing unit above evaporator unit – 35 ft (10.7 m) (installations with rise over 20 ft (6.1 m) require additional suction line s-trap at midpoint rise).
4. The evaporator can only be mounted a maximum of 15' (4.6 m) above the condensing unit.
Note: The service loop is not included when calculating length, rise or drop in the tubing run.

Note: To connect evaporator/ice machine to rack systems, see page 3.
